★ SAFETY INSTRUCTIONS

PRECAUTIONS DURING SERVICING

1. Parts identified by the Δ symbol are critical for safety. Replace them only with the parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with the specified replacements.
Examples: RF converters, tuner units, antenna selector switches, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts.
Note especially:
 - 1) Insulation Tape
 - 2) PVC tubing
 - 3) Spacers (insulating barriers)
 - 4) Insulation sheets for transistors
 - 5) Plastic screws for fixing micro switches
5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.), wrap the ends of the wires securely around the terminals before soldering.

6. Make sure that wires do not contact heat producing parts (heat sinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Make sure that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

SAFETY CHECK AFTER SERVICING

After servicing, make measurements of leakage-current or resistance in order to determine that exposed parts are acceptably insulated from the supply circuit.

The leakage-current measurement should be done between accessible metal parts (such as chassis, ground terminal, microphone jacks, signal input/output connectors, etc.) and the earth ground through a resistor of 1500 ohms paralleled with a 0.15 μF capacitor, under the unit's normal working conditions. The leakage-current should be less than 0.5 mA rms AC.

The resistance measurement should be done between accessible exposed metal parts and power cord plug prongs with the power switch (if included) "ON". The resistance should be more than 2.2 M ohms.

III. SUPPLEMENTARY INFORMATION

3-1. SERVICE MODE

3-1-1. Booting up the operating system from the Floppy disk drive

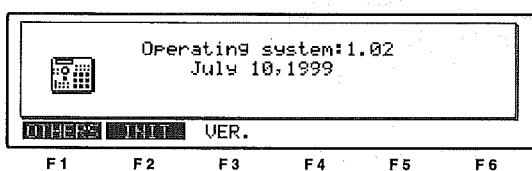

Insert the OS (operating system) floppy disk into the floppy disk drive.

While pressing and holding both of the REC and OVERDUB buttons, turn the power on.

The MPC2000XL will search for the OS disk and load it into the system instead of reading the Flash ROM's OS. Because of this, you can use a different version of the OS without erasing the flash ROM's OS.

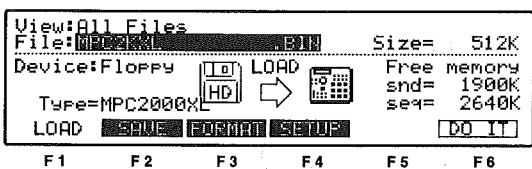

3-1-2. Version check of the boot operation ROM

30 seconds after the power is turned on, enter the "OTHER" mode and press the "F3" (ver.) button. The following screen will be displayed. While pressing the "F6" button, the operation ROM's version and boot program version will appear on the screen.

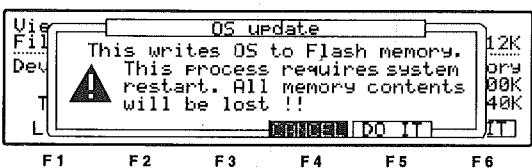

3-1-3. OS upload

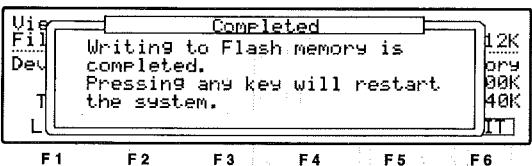

- 1) Insert the updated OS floppy disk and then move to the "LOAD" page. The filename MPC2KXL.BIN is displayed on the second line from the top. Press "F6" (DO IT).

- 2) The following screen will appear on the display. Press the "F5" (DO IT) button.

- 3) Press any other button to exit from this screen.

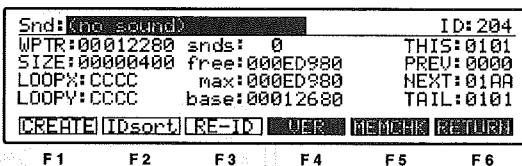

3-2. TEST MODE

3-2-1. Entering the TEST mode

Press the "SHIFT" and "F1" buttons at the same time while the unit is in the "TRIM" mode.

The following screen will appear on the display.

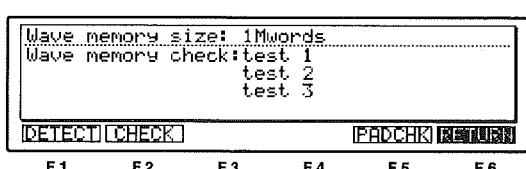

Note1: The F1 (CREATE), F2 (IDsort), F3 (RE-ID) and F4 (VER) are for factory use only. To avoid any occurrence of trouble, do not press these buttons (especially if the OS version is V1.0).

Note2: To exit from the various check modes, press any other button such as "MAIN SCREEN".

3-2-2. Wave memory check

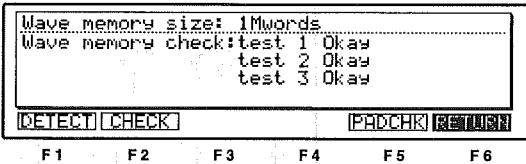

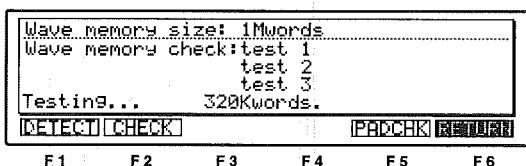

Press the "F5" (MEMCHK) button in the test mode. The wave memory check page will be displayed.

Installed memory size is displayed on the screen.

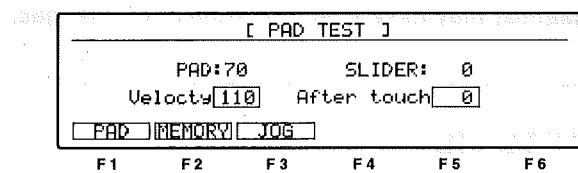

1) Pressing the "F1" (DETECT) button will detect the memory again. You must be careful as the loaded sound data and program data will be lost in this case.

2) Pressing the "F2" (CHECK) button will check the memory. You must be careful as the loaded sound data and program data will be lost in this case.

3-2-3. PAD check

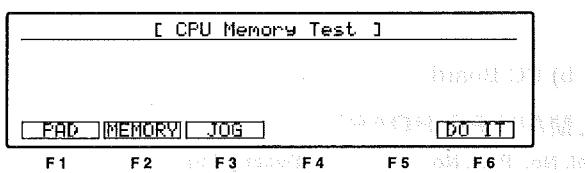

- 1) Press the "F5" (MEMCHK) button in the test mode. The wave memory check page will be displayed.
- 2) Pressing the "F5 (PADCHK)" button will display the pad check page.
- 2) Press any of the 16 pad buttons. The pad number that you pressed will be shown in the display and the velocity and after touch conditions will be displayed momentarily.

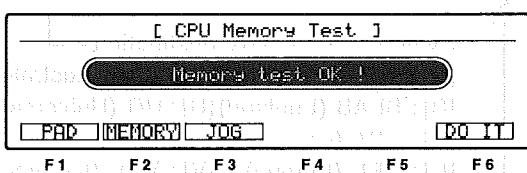

- 3) The SLIDER value will change from 0 to 127 when the SLIDER volume is moved from bottom to top.

3-2-4. CPU MEMORY check

- 1) Press the "F2" (MEMORY) button while the PAD check page is displayed (step 3-2-3).

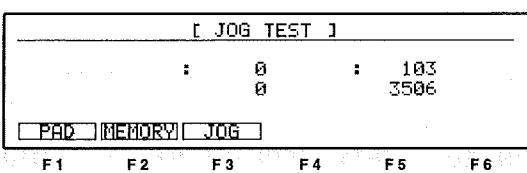

- 2) Press the "F6" (DO IT) button. The following screen will appear if the CPU memory is normal. You must be careful as the loaded data will be lost in this case.

3-2-5. JOG check

- 1) Press the "F3" (JOG) button while the PAD check page is displayed (step 3-2-3).
- 2) The real count value is displayed on the upper line and the accelerated count value is displayed on the lower line of the screen. If the "DATA" knob is turned slowly in the left or right direction, the lower line value is the same as the real count value. If the "DATA" knob is turned quickly, accelerated count value is displayed on the lower line.

- 3) To reset the count, press the "F3" button.

3-3. Boot block recovery

3-3-1. Operating system

The MPC2000XL is designed to operate with an operating system that is held in flash ROM. If this becomes corrupt, or an operating system upgrade is needed, the contents of the flash ROM must be reprogrammed.

3-3-2. OS recovery with boot EPROM

Note: Turn the unit's power off before starting.

- 1) Set the JP20 jumper to the 2-3 position on the PC MAIN.
- 2) Insert the updated EP-ROM into the IC20 socket.
- 3) Set the JP30 jumper to the 2-3 position.
- 4) Turn the power on.
- 5) Press the "F5" (BOOT) button on the "DISK SAVE" screen. The "JP20 Change P-ROM ⇔ F-ROM" message will appear on the display.
- 6) According to the instructions, set the JP20 jumper to the 1-2 position.
- 7) Press the "F6" (GO) button. The "FROM Boot write complete!!" message will appear on the display.
- 8) Turn the unit's power off.
- 9) Return the JP30 jumper to the 1-2 position.
- 10) Disconnect the EP-ROM from the IC20 socket.
